REVETEMENT ANTIBACTERIEN

Antibacterial (RAL 9016) **A96**

FR C'est un revêtement antibactérien blanc RAL 9016 contenant des composés d'argent. La libération des ions d'argent fait détruire des bactéries et arrêter la croissance de moisissures et de champignons. L'utilisation de ce revêtement est recommandé en particulier pour des appareils situés dans des pièces sanitaires. Le service de couverture antibactérienne égale le supplément couleur..
